

The complete fleet

Campaign road transport and tactical arrival vehicles.

FROM A \$90 BICYCLE TO A TROOP TRANSPORT

Civilian vehicles do most of the work. Faction identity comes from the model, condition, and occasional official livery - with broad access in the test sandbox.

Yardbird Bicycle

Monarch V12

Pilgrim Bus

Bastion Personnel

Two-Wheelers

10 models / 1-2 units

Passenger Cars

14 models / 1-4 units

Utility Vehicles

10 models / 1-7 units

Heavy Transports

12 models / 1-12 units

Prices and upkeep are the first balance pass. Expensive luxury vehicles do not grant hidden combat bonuses.

How the fleet works

Shared rules for every model in this guide.

Seats include the driver

A four-seat car moves four of your units in total. Every moving vehicle needs one actual unit to drive or ride it; no free extra driver is created.

Travel uses road distance per turn

The movement number is campaign distance, not real-world mph. A convoy moves at the pace of its slowest vehicle. Splitting a convoy can preserve the speed of its faster group.

Heavy Transports carry all freight

Only this class can load campaign resources. Cargo is counted in abstract resource slots. Passenger capacity and cargo capacity are separate, simultaneously usable limits.

Real seats, realistic compromises

Pickup beds are not troop seats. The Shortbox 11 has two cab seats and 24 cargo slots. The Shuttle Twelve has twelve seats but just two cargo slots.

Parked vehicles and cover

These are arrival vehicles with parked physical footprints. Two-wheelers provide no vehicle cover. No turrets, mounted guns, hidden unit armor, or vehicle-driven outfit changes are added.

Everything is available in the sandbox

All 46 models are unlocked. The faction lists are suggestions, not restrictions. The current sandbox convoy builder carries the five attacking units; defenders occupy the existing objective.

Keep the campaign scope clear

Catalog prices, upkeep, purchases, cargo transfer, save data, and road-speed hooks are prepared. Full campaign vehicle shopping, capture, repairs, and fuel logistics are later systems.
